

The Bamboo Flooring Systems difference:

We know bamboo:

Buying Ecodure bamboo is easy – we are New Zealand’s number one bamboo supplier, the most trusted, and long-established. We work with you to select the best plank and installation method for your environment.

1. We regularly visit China to ensure our product is the best available, and have a local independent agent who checks quality . Bamboo is not subject to formal grading system – claims of “architectural grade” bamboo are spurious.
2. Continuous product innovation is part of our business – we are the first to offer a waxed UNICLIC join.
3. Unlike suppliers who run through part time through TradeMe, static displays, a website , 0800 number or just a cell-phone, we are open 6 days a week, with a fully staffed showroom in Auckland. We are ALWAYS on hand to serve you- this is unmatched by direct sellers. We also sell through leading experienced retailers.
4. Be wary of newer flooring companies who have only had their product in the market a year or two – this is not long enough for the product to have been fully tested in NZ conditions. Smaller direct suppliers often do not last as long as their warranty period. ”Buyer beware”, at present goods purchased in on-line auctions are not subject to the same consumer laws and warranties as goods purchased through normal channels.
5. We have a large fully stocked product range- multiply , engineered and solid planks ,uniclic and waxed edges available, NZ’s largest selection of planks and colours. FSC certified product available to order*.
- 6 . Best showroom display available in NZ ,open 6 years ,with a complete range available to see and walk on in the showroom . Visit our showroom and experience the difference- large floors up to six years old that you can walk on, no samples on the wall that are only good for show. Also displayed at Wellington Home Ideas Centre.
7. ECODURE is the only supplier of cold pressed compressed bamboo in New Zealand and our solid plank is constructed in a unique way which avoids warping and cupping. Cold compressed bamboo is a superior product which takes longer to produce than quicker, cheaper hot compressed boards.
8. NO charge for samples.

*conditions apply,please enquire.
